DIRECTIONS

HOW TO
PLANT

Azalias are to be planted 18 x 24 inches apart.
Up to 10" - 12" Head 7" Pot Sizes. The hole should be 10 to 14" in diameter. Peat Moss is to be about 2 inches or more deeper than the root ball. The Peat Moss should be soaked before planting. Add 15 to 25% soil to the Peat Moss and cover plants; then after planting keep plants moistened with water every day for two weeks or more, depending on weather and soil conditions. Ask salesman on other conditions or for further information.

SPRAYING
CONDITIONS

We recommend Black Leaf-40 for use as insecticide. Spraying should be done in the following manner:

Under the leaves for Red Spider and Thrip - 60 to 90 days apart. For Aphids & Mite spray from top to bottom at the same time, but before spraying, the roots system should be thoroughly watered.

Apply spray only when leaves are dry, do not spray in the hot sun, the evening is the best time.

FERTILIZING

We suggest using blood meal or cotton seed meal. One teaspoon full on a plant in a 5" pot with a 6-inch spread, and proportionally according to size. This should be done about eight weeks apart; two or three times during the summer. Do not feed after freshly planting - feed from seven to ten weeks after planting.

NOTE: SUCKER GROWTH ON THESE GRAFTED AZALEAS ARE FOUND NEAR TO THE GROUND OR ONE OR TWO FINGERS FROM THE GROUND. THESE SHOULD BE PULLED OFF.

THE IMPORTANCE OF GRAFTING IS FOR A MUCH BETTER ROOT SYSTEM, FASTER GROWTH, MORE BUDS AND STRONGER FLOWERS.

VARIETIES NOT LISTED ARE IN BLOOM FROM SEPTEMBER TO MAY
